WE'RE STILL ALIVE, AND FINALLY BACK!

AT LAST!

We're back to show how FIWA Got its first ever OSN Gold Medal, Our Nation's independence day, Graduation 26/27, and more!

Where have we been?!

A lot of you might've been wondering; When's the next edition? Is Fitrah Tribune (FITR) just dead & abandoned?! Well, no, we aren't dead. Truth is, we've been really really busy focusing on behind-the-scenes administrative things, and more!!

As maybe referenced to last edition, when we went on temporary "Hiatus", we were busy making our Proposal for Official Recognition from FIWA, and sending it to the Principal. After a while of waiting, we've gotten our response, and all of it is has been Approved!

Since then, we've gotten a Pendamping (Ustadz Baihaqi), registered under the club category in FIMS, and more.

Also, I, Ammar, the EIC/Leader of FITR, have been sick for a couple of bursts of days. There was the time I was supposed to stay in the hospital for three days and back home for 2 more, then recently I've gotten a high fever and also had to go home because of that for three more days. It ended up totaling to almost 2 weeks of me gone from FIWA and at home, which is a bummer for every other tribunee since they needed my directions, which there was a lack of. In reality though we were trying to make the newspaper and stuff but we're still rusty after the long holiday.

However, this week and the last we've started to actually lock back in, as i have (insya'allah) fully recovered from all the things that were plaguing me from being consistently present at FIWA!!! So expect the same activity that we had before this academic year. Insya'Allah, after the posting of this newspaper, everything will be back & going smoothly!!

Writer: Ammar Mufiid Johansyah

NEW CURRICULUM, TEACHERS, AND PDCs!!!

Hello my new brothers at this Ma'had, and welcome back for old students. Well, FYI, Many teachers have come to FIWA to teach us especially in the Diniyyah Division which contains 40+ new teachers & *PDCs* (Personal Development Coach). There's also a lot of new arrangements such as more diniyyah classes, overhauled time schedule, and more!

"How about the Curriculum, what do you mean by New Curriculum?"

The curriculum is called Quantum Horizon. Where Dunya and Faith are combined. In the old days, we used like 3 - 4 platforms or applications to study and do tasks. Now, an application called LMS; ~~*Last Man Standing*~~ I mean *Learning Management System* has combined them all. The most interesting is the HTML, where we can find all of them on LKPDs. You can interact with the items digitally, you can answer the questions and understand the material without opening like, 5-6 tabs or downloading the textbook. So, FIWA is trying very hard. Making it Student-Based and Fun. If you see, sometimes there is an Islamic Value on the HTML on how things happened. So, we don't only understand it theoretically. We also understand it with Faith.

Ustadz Johan told us; "I'm very optimistic with this new curriculum. Many teachers have now identified what is learning and how to learn. I hope this curriculum can make our student become a high-achiever and help them later in the future"

GOLD MEDAL ON OSN - FIRST IN FIWA!

Fadhlurrohman Fachri Alfayyad (Usually called Ifad) has won a Gold Medal on OSN Tingkat Nasional (OS-N). This is the first time an SMP student made it into OS-N, and **The first time FIWA has ever gotten a Gold medal in OS-N!** (full article on Page 5)

Full article on page 5!

MERDEKA INDONESIA!

— "Indonesia Berdaulat, Adil, dan Makmur!" | 81 years of independence, celebrated all across our country!

HUT RI 81 UPACARA WITHIN FIWA

The day of Upacara Kemerdekaan Indonesia happened on 17th of August 2026, at FIWA. The ceremony began at around 7:30 am with students from all grades, along with teachers gathered at the courtyard. Students lined up in their respective grades and teachers in their own formation standing straight and firm, as the student officers prepared themselves.

By the time everyone gathered and everything were set, the ceremony began with the announcer announcing the start of Indonesia's Independence Day with a doa. After that the student commander shouted outs orders to three students before they gave their reports that everything is ready.

After that the Ceremony leader came into the field with the students saluting under the student commander's order. As the ceremony leader arrived in front of the mic, the flag raising team came into the field marching towards both the ceremony leader and the empty flag pole. As the flag-raising team marched into formation and placed the flag, it was there that the Indonesia's national anthem was sung by both the students and teachers while the flag was being raised to the top.

By the time the Anthem ended, the flag-raising team dispersed from the field, letting the Ceremony leader speak out the five Principles (Pancasila) with the students repeating after the leader. Afterwards the Ceremony leader began to read out the National Independence Day speech to everyone. By the end of it, the student commander called everyone on for attention before the announcer called out for the ending of 2026's Indonesia's Independence Day in FIWA, before everyone left for their classes.

AIRSHOWS AND EVEN MORE CELEBRATIONS ACROSS INDONESIA!

Outside of FIWA more amazing cool things were happening, celebrating our glorious Nation's independence in ways that are very Unique and cool!

The Actual, Official ceremony at Istana Merdeka:
At 10:00 AM in Istana Merdeka, Pak Prabowo Subianto led the *Detik-Detik Proklamasi*, after which seventeen (17!) cannon shots and a long siren marked the start of the commemoration. Pak Prabowo read the Proclamation text himself, and handed the *Bendera Pusaka* to Paskibraka member Celina Olivia Apriani Theo. There were around 8,100 invitations, including of course, the president and vice president and other high ranking officials.

At 10:17-10:20, there was a Nation-wide stopping for all activities; because that's when *Indonesia Raya,* our national anthem, and the Pancasila was held during the actual 17th of August 1945. It's also, i'm pretty sure when the actual pancasila was read.

Then after the actual Upacara is the Celebratory Events!!! These are the coolest ones, and the best one is most definetly **The Airshows!!!**

First of all, there were exactly 81 aircrafts that were used during this airshow, including lots of Helicopters, Fighter Jets, and more. The coolest ones were obviously (and not biasedly) the Fighter jets. This was the first official flight of the four French Dassault Rafales that Indonesia has just very recently acquired, and is probably the most advanced fighter we've had.

There were also F-16s, SU-27/30s, and more. All of those cool aircrafts did cool manuevers, including the image that you see below of the *Jupiter Aerobatics Team* doing some aerobatics stuff. It's really cool.

Of course, there are other cool celebrations across indonesia that i'd like to put here, but it's already too long. In the end, we should all be grateful for our independence, despite all our current problems. *Alhamdulillah*.

**Image of the Jupiter Aerobatics Team flying over Istana Merdeka with smoke trails of red and white, the colours of our flag. Credit: MinaNews*

FIWA 2026/27 GRADUATION!

— Graduation for the SMPs (now grade 10) & SMA Ikhwans & Akhwats, held during the holiday at IPB Convention center

PRE-GRADUATION

*Image of them in lines before entering the ceremony hall

The night before the ceremony, many Graduatees were staying in the hotel next to the Graduation Ballroom. The ballroom is also kinda situated within a Mall, so the night before the ceremony, many Graduates decided to go the mall to buy some supplies, food, and whatever that they needed.

The morning of the ceremony, around 7-8 AM, the graduatees suited up (literally & metaphorically), ate at the hotel's Restaurant, and prepared to enter the ballroom. Before they entered the ballroom they lined up in lines (STS), and during that time we managed to interview one of G12 Alumni about what they think about this graduation. Overall, they were pretty excited.

Writer: Ammar Mufiid Johansyah

THE ACTUAL CEREMONY

The actual graduation event that's actually the point we're actually talking about

At around 8:15 AM, almost an hour after the graduatees were (*supposed)* to be ready, The MCs (Nevan Raziq & Agasya of now grade 12) Announce all the ceremony Guests & Participants to sit in their designated seats, and then finally, the Graduatees enter, Starting from the SMP Akhwats & then the SMA Akhwats, then the SMP Ikhwans and finally the SMA Ikhwans.

After all of the participants sat on their designated seats, the ceremony finally began. It started of course with the inspirational speeches of the principals, from Ustadz Zulkarnain first as the SMA principal, then Ustadz Giri Widodo as the SMP principal, then from Ustadz Johansyah as the mudir of FIWA, and then the two Akhwat SMP & SMA principals as well.

Alhamdulillah all of their speeches were amazing and very heartful, with very good Advice and warnings about very real dangers that lurks in the outside world, most notably about Syubhats & Shahwats.

After a few speeches that would be way too long for me to describe here, finally, the thing that *We've* been waiting

*Image Gallery of the SMP & SMA Graduatees, taken from the FIWA GRADUATION 2026 Youtube Video

*Image of a graduatee standing up to the front to collect his medal, Diploma Scroll, and Report Card

for the entire time; **The Graduation Procession**

At around 11:45 AM, Starting from the Akhwat SMP Students, one by one their names were mentioned as well as each of their descriptions were called to the front to shake hands with the Principal/School-Faculty.

They're given a medal and Diploma Scroll, as well as their report card as seen also above. This is followed by the Akhwat SMA Students, Ikhwan SMPs, and finally the Ikhwan SMAs. Lots of funny descriptions were witnessed, and overall, it was a nice time.

After the procession, there were some videos of Advice/Nasehat from the each angkatan's Musyrifs, like Ustadz Nizham, and more. After that there was a video recapping all of their journeys within this ma'had, and... that's the whole ceremony!

There were lots of pictures taken after that of each angkatan and more (like the one next to this), and it was a very emotional moment for each graduatee and their parents. May Allah give them *Hidayah* & *Istoqomah* upon the right path, *Ameen.*

INTERNAL FIWA NEWS! PT.1

— Construction progress of the school, since the last two+ months!

BUILDING G FINISHED & BEING USED!

Building G is a four floor building that's located in front of the swimming pool. Its first construction was nothing but an empty slab of space that made the swimming pool very spacious to run around, soon pillars were planted around it that was going to be the bathrooms that we now use before and after swimming.

Before the start of this semester, building G was nearly finished with the interior being worked on. After a few more days before the start of the academic year, it finally finished and was assigned to the PDCs, usatds, and musrifs.

The first floor contains a project office where the Ustadzs' job is to monitor the project going on in Building H, behind the project office is the bathroom stalls that students use to take a bath after swimming and change their clothes

The second floor is the room for the Ustadzs, also including a small library where students and Ustadzs would gather there for either lessons or other sessions, and also arabic-focused lessons. While having only one bathroom and laundry room, including a sink

Both the third floor and final floor only contains the Usatds' room, each having only one bathroom and a laundry room with a sink.

Writers: Akio Hideaka & Naufal Rian

CHANGE OF PLANS!

In the night of Friday, 14th of August around 08:15 PM, an unplanned meeting with FIWA's current director and founder, Ustadz Johansyah, has revealed new plans regarding the usage of the new buildings. Excluding the already established G building, he stated the finishing date for these new buildings will be the next semester, the start of January, to be precise, Insya'Allah

The previous plan, to make a functioning cafe' in C2 is still running. He mentioned the migration of the ikhwan teachers office from A2 to C2, is only temporary. The plan is to move the teachers office to the current Ash-Sahaba mosque and FIWA library. The change in plan will be the new ikhwan science laboratory to the previous teachers office location in A2.

If we take Ustadz Johan's current building plan, we will see the new buildings inluding the current one being built, Building H, as:

- Cafeteria (Building C floor 2)
- New mosque (Building H floor 1)
- New FIWA library (Building H floor 2)
- New Multipurpose hall (Building H floor 3)
- Science labs (A2 building across of grade 10 classes)
- HRD office (Current mosque, top floor)
- Teachers office (Current mosque, bottom floor)

Other stuff that has been changed/added:

There are new installations of electric circuit breakers right outside of each room in A2, which have greatly improved the electrical efficiency.

Though not many have noticed but right behind Call Center (CC) and the High school Principal's room was where the toilets of A2 used to be before it got closed changing it into an empty balcony, with newly added Metal Fences. It used to be blocked since there were no fences just a few weeks prior.

With the addition of the balcony there is also another massive circuit breaker, or to put it simply a wire box that seems to be helping with the newly installed much smaller electric circuit breakers (or wire boxes) outside of each room in A2, and all the new big wire revamps.

Right below the balcony in A2 is either going to be just an open room or an enclosed space that is the new gym where all of the equipment will be used there and students who want to work out are to be in A1

However, just as an important note incase anything that we've said will happen didn't, is that **All of this is subject to change.**

**Image of the massive power box behind the Call Center/Principal Room*

INTERNAL FIWA NEWS! PT.2

— The FIRST EVER OSN GOLD MEDAL in FIWA, ever, a ~~dumb~~ amazing FIWA QUIZ, and some Weather News.

GOLD MEDAL AT OSN!!!

As you all heard a few days ago from either Ustadz Johan's Announcement at the front of the mosque or just word of mouth, **For the first time in FIWA's history, We've gotten a gold medal from OSN!!**

Fadhlurrohman Fachri Alfayyad, more commonly referred to as 'ifad', is the person who won this great honour. He's the first ever SMP student who got into the national level on OSN and the first ever in FIWA's history to get a gold medal from it too.

**Ifad's certificate for getting a Gold Medal at OSN. Source: PusPresNas Youtube Livestream*

For those who didn't know, back when he was grade 8, at the end of the first semester, there was an Olympiad Program for smart students and stuff. First, anybody who wanted to join it were asked to, and those who joined were sorted out and then finally, the Olympiad class; **8D**, was born.

The early days during the sorting-out phase were pretty unique. They studied day and night. One of the massive hurdles we faced was that they had to study and master an entire math subject in 2 hours.

After around 15 people applied, only 10 passed through, and they became the renowned 8D. 5 of them chose math, and 5 of them science. Because their sole goal was to win an OSN gold medal (which they achieved), the schedules were kinda absurd, with 3 full days of Biology, 2 days of physics and a day of math, and for the math class, 4 days of non-stop full math and a day for biology full and another for physics full. Alhamdulillah, all of their efforts paid off, as FIWA has now gotten a golden medal on OSN because of their efforts, and also due to Allah.

Writer: Ammar Mufiid Johansyah

FIWA QUIZ:

Who's the person who is responsible for supervising the Maintenence Division?

1. **Ustadz Cas**
2. **Haykal Alfatih**
3. **Ustadz Fian**
4. **Pak Yansyah**

The answer will be posted next edition!

Previous quiz answer: B. Ustadz ~~Adhi~~ Abhi

Quiz Creator: Ammar MJ

WEATHER UPDATES!

AAA ASH IS EVERYWHERE!11!

On the night of Jum'at, 4th of September, just two days before this article was written, *Gunung Anak Krakatau* (or more commonly called "GAK"), the descendant of the Krakatau Volcano, erupted. According to *Badan Meteorologi, Klimatologi dan, Geofisika* (or BMKG) for short, the Booms and termors were heard from as far as *Jawa Barat* and *Sumatra* as well. The booms in particular reached Lampung and Banten around the same time it erupted.

**Recent image of GAK Erupting*

FIWA Itself got affected. Just today on Sunday, at around 8:00 AM, all students were told to head inside their rooms and not go outside except with Masks, since the ash got here as well. Some parts of bogor got hit even harder with the ash, saying things like Cars getting covered with ash overnight, and more. **We urge all students to wear masks when outside of rooms & classes.**

INTERNAL FIWA NEWS! PT.3

— Even more student achievements since the holidays!

STUDENTS' ACHIEVEMENTS!

— OSN Participants move onto Province and <u>NATIONAL</u> Levels, OPSI Participants Also currently on NATIONAL Level , and more!

Since the start of the holiday, students from SMP and SMA have competed in three national Competitions and One International Competition as well. Each school can send only two students per subject to OSP, so there being 4 8D guys who got into OSP means that the OSN Program Worked perfectly (for SMPs), plus the three SMA students who got to OSP as well.

OSN

Kabupaten - Province - National

Olimpiade Sains Nasional
The following names below passed through Kabupaten Level (OS-K), and moved onto Province Level (OS-P) for SMPs:

MATHEMATICS:
Ibad Fadhl Rayyan & Ilmy Ahmad Dzikri (9D)

SCIENCE:
Fadhlurrohman Fachri Alfayyad & Anaqi Ziyad Averrusy (9D)

And for OS-P Participants on SMAs:

ECONOMICS:
Muhammad Raqib Faqihan, Naufal Azka Setiawan, & Rasyid Rabbani

EARTH SCIENCES:
Fathi Rizqi Ramadhan

CHEMISTRY:
Muhammad Rafa Ramadhan

GEOGRAPHY:
Muhammad Kaisar Assyauqi

PHYSICS:
Naufal Aziz Nugraha

Out of all of those names, only **Fadhlurrohman Fachri Alfayyad** (Ifad) got into OSN National level (OS-N). And Alhamdulillah, as already mentioned in the page before this, he got the **GOLD MEDAL!11!** (for more info, go to the previous page)

IAPhO

International

International Applied Physics Olympiad

The following names are the ones who won IAPhO, from SMA:

Category Case A:
Fauzan Azka G11 - Bronze Medal 🥉

Category Case B:
Muhammad Kaisar Assyauqi G12 - Gold Medal 🥇
Muhammad Aidan Nafidz Lovinno G11 - Silver Medal 🥈
Raja Fadly Hamonangan Harahap G12 - Bronze Medal 🥉

(We do not know what the "Category Case A/B" means :v)

OBA

Kabupaten - Province

Olimpiade Bahasa Arab

Alhamdulillah, **Anaqi Ziyad Averrusy & Dhifna Fawwaz Khan** of 9D has Competed and passed through Kabupaten level, and has just participated in the Province level on the **27th of August.**

Completed:
Kabupaten Level on the 6th of May
Province Level on the 27th of August.

Unfortunately, both of them did not pass through Province level. *Qoddarullah*

OPSI

Pre-National Stage

Olimpiade Penelitian Siswa Indonesia
Competing in OPSI's Pre-National Stage, there are 4 teams, one from SMP and three from SMA. Those being:

- **SWIFTPATCH TEAM** | Bio-skin patch for wound healing
  - Dimas Bayu Putra Sunarto 12A & Kees Ramdhani Breure 12B
- **RAKA TEAM** | "Greenwashing gap index for soap brands"
  - Nevan Khaizuran Raziq 12B & Andika Laurinda
- **Ifad & ATHANAYA's TEAM** | Bio-preservatives from fruit shell and leaf extracts
  - Fadhlurrohman Fachri Alfayyad 9D & Athanaya Sakthi Abdillah
- **NASER FADHIL ALI & MIKAIL AS-SABIQ'S TEAM** | SNEDDS delivery system for antidiabetic activity
  - Naser Fadhil Ali & Mikail As-Sabiq

All of them have submitted their Experiment Results on the 31st of August, and then there will be Evaluation of those, and finally the Finals, offline Nationals on September 24-30th.

Writers:Muhammad Arza Zaydan & Ammar Mufiid Johansyah

FITRAH TRIBUNE

— What's FITR and what do we do?

**Insignia/Logo of Fitrah Tribune, Cream White representing Approachability, Yellow/gold being Clarity, and dark blue being Trustability.*

Fitrah Tribune (Or FITR for short) is a community made by students. A student community, with the main purpose of creating amazing cool fascinating mind-blowing interactive shocking newspapers, and general Journalism! It's also important to note that Fitrah Tribune is completely separate from every other internal organisation in FIWA except for FIWA as an institution as a whole. So no, we are not part of SOFWA or any other organisations, even though maybe some of our members are in SOFWA as well.

Currently, we post newspapers around every 2-3 weeks (Semi-Fortnightly), after realising that 2 weeks is too harsh on us, and we couldn't handle the pressure :v. We use english as the primary language in them, with this brand new format thats' been clarified in the Last Edition (edition 3.5)! We use minimal/zero AI assistance for creating the newspapers and when we mean minimal/zero we mean not copypasting slop from them and so on.

OUR STANDARDS

1. Clarity

How the information is perceived. Every article is researched and should be easy to take in.

2. Approachability

Not too professional, not too casual. We write the way a thoughtful older sibling would explain; with care, but without stiffness.

3. Trustworthiness

Our standards are the same in every Edition. Trust grows slowly, and we build upon it edition after edition.

4. Transparency

We do not remove facts or alter them in any way. If we've made a mistake, we will announce it as a mistake

TRIBUNEES:

Editor In Chief (EIC): (G9)Ammar Mufiid Johansyah

IT/Coding Guys: (G8) Aldebaran Gibran Altaf

(G10) Muhammad Arza Zaydan Suralaga

Writers: (G8)Fathan Assyauqi Hiliry

(G9)Akio Hideaka Takijoeddin

(G10)Muhammad Ziya Ibrahim

(G11)Khalifah Agidra Filard

(G12)Naufal Rian

(G12)Fathi Rizqi Ramadhan

Photographer: (G10)Muhammad Shahza Kentzhad Sakrade

Pendamping: Ustadz Baihaqi Zakaria Muslim

What's next, and more!

After learning and assessing from what may be causing this newspaper to be delayed so much, we're going to be making some reformations on how we work.

First of all the one that affects the readers the most is our cycle. We'll be switching from a 2 week fortnightly cycle to a 2-3 week Fortnightly cycle. The first week is going to be planning what topics to do, second week making the newspaper, third week checking period by CAE, and more.

Secondly, we're planning to make everything that we do much more standardised, especially the 3 week cycle. We may even make an SOP, though it's going to be a very light one, since we still want to have some flexibility.

finally, we've got some special news; **We've gotten a new member;** Muhammad Ziya Ibrahim of G10. He'll be working with us as a writer.

However, just a few days before that, one of our members, Muhammad Razqa Abyan of G8 left, unfortunately. He left honourably, and it was a pleasure working with him. He was very good at his job :D

Writer: Ammar Mufiid Johansyah

EXTERNAL NEWS!

— Football & Industrial 4th-5th Revoution!!!

WORLD CUP AND PRE-SEASON TOUR

The most prestigious sports tournament, the FIFA World Cup, has ended. Spain, the 2010 champions, faced Argentina, the 2022 champions, in the World Cup final at MetLife Stadium in New Jersey, USA. Spain dominated with 60% possession, taking 20 shots with 12 on target. In contrast, Argentina held 32% possession (with 8% contested) and managed 2 shots, with 0 on target.

The decisive moment arrived right after the extra-time break in the 106th minute, when Ferran Torres scored the winning goal with a volley off a header from Nico Williams. After a 16-year wait, Spain won the 2026 World Cup. To add to Argentina's troubles, Enzo Fernández was sent off before extra time, leaving them with only ten men for the entire extra period. Spain swept the individual awards, with Rodri winning the Golden Ball, Unai Simón taking the Golden Glove, and Pau Cubarsí named Best Young Player—while Kylian Mbappé claimed the Golden Boot with 10 goals.

The JDT match ended in chaos! A penalty shootout was supposed to be called to settle the draw, but both teams exited the field, leaving the crowd confused. Chelsea's Head of First-Team Operations was caught on camera arguing with the referee, insisting the shootout was valid and contractually required.

The match schedule began on August 1 with Aston Villa's 3–1 victory over the Indonesia All-Stars at Gelora Bung Karno in Jakarta. The next match took place on August 7, with Bayern Munich defeating Aston Villa 2–1 at Kai Tak Stadium in Hong Kong. A day later, on August 8, Chelsea beat AC Milan 3–0 at Gelora Bung Karno in Jakarta. The final match occurred on August 9, resulting in a 3–3 draw between Johor Darul Ta'zim and Chelsea at Sultan Ibrahim Stadium in Malaysia.

Writer: Muhammad Razqa Abyan & Naufal Rian

INDUSTRIAL 4/5TH REVOLUTION

The 4th revolution is in the process of changing their numbers. Yes, we're on the stage of being in the 5th revolution. Back in the old days, technology was rapidly improving. Starting from programming the computer, computing the robot, saving with big data and searching things with IoT (Internet of Things).

They help us even in the Pandemic Era. We could still know about what is happening with the earth, work from home, meet online and anything else.

Lately, AI has grown so much until it starts doing what humans do. Working, studying, doing things even organizing important things. But they add more work because we need to re-check how they answer & work. It could decrease me-time and cause burnout.

Furthermore, here comes the 5th revolution. where it doesn't "improve the AI". But it "Integrate the Ai" with humans. you don't trust me? Aight, have you guys known. Learning Atoms that actually need so many visualisations, had come with a technology where you can actually see the atom with your own eyes. Using VR, it is a fabulous way for improving with the studying sector.

Sustainability also became one of the most fascinating things if we talk about this revolution. Renewable energy decreases the carbon emissions, and also give less fossil fuel energy loss.

The supply chain now had given a lot of attention to picking what they distributed. Especially on this revolution. They didn't focus on the "profit" again. They now chase to refine this earth into a better world. People started focusing on picking materials that didn't affect the Earth and Nature

Ever heard of Solar Panel becoming advanced time over time? They use the energy from sunlight. Now, It's Geothermal time. There is something called a digital twin. Which people can do so many experiments on the computer of all causes using AI without doing it in real life. It reduces financial and material loss. And it's more sustainable on this Hybrid Era.

And there are so many things to know about this revolution. Wanna know more? You can ask AI or Google search to know it.

**Image of factories, representing the time of the 3rd Industrial Revolution that's now passed*

EXTERNAL NEWS! PT.2

— The largest Saudi education and scholarship exhibition in Indonesia, and how FIWA Students visited it!

SAUDI EDUCATION EXPO, YOUR GUIDE TO SAUDI ARABIA'S BEST!

From the 31st of July until the 2nd of August, the Indonesian Students Association in Saudi Arabia (PPMI Arab Saudi), hosts one of the biggest national Saudi Expos in Indonesia, The Saudi Education Expo (SEE). This event has a sole purpose of connecting students and parents in Indonesia towards opportunities of education in Saudi Arabia. This event was held in Jakarta's SMESCO convention and exhibition hall.

During the event, 30 booths, 19 in the male zone and 11 in the female zone, represent multiple universities present in Saudi Arabia. In addition, multiple booths also provide information for SAT, TOEFL, IELTS, campus preparation, and many other training courses. Multiple food stalls are also installed for hungry visitors and a main stage where each representative group will present their associated campus or course according to the given schedule.

Remarkably, the thought of studying in Saudi Arabia has caught the eyes of many Indonesian students, parents, and even teachers on a national scale. During the 3 day execution of the expo, nearly 6000 people visited every single day. The tickets sold out very fast, especially during Friday (July 31st) and Sunday (August 2nd).

Once visitors enter the SMESCO building, located in Southern Jakarta, they will find two main spaces of the event. The first space is the main exhibition hall. Roughly 1,408 square meters of floor space, the area was used to house multiple booths of campuses and training courses, food stalls, and the stage used for university and training talk shows. This area can only accommodate around 2500 people at a time. Security consisting of volunteers will lock the main door whenever the hall gets too cramped with visitors.

Meanwhile, the second area of 1,797 square meters was located at a higher floor, accessible via an escalator a few meters away from the main hall. This area is used for seminar panel discussions, talk shows, and for the event's opening ceremony. During FIWA's study tour to SEE on Saturday 1st of August, the ongoing seminar was ahosted by Ustadz Muhammad 'Abduh Tuasikal *hafidzahullahu ta'ala,* in his seminar titled "Alumni Talks: Realita, Peluang, dan Pengalaman Kuliah di Arab Saudi" (Alumni Talks: Realities, Opportunities, and Experiences of Studying in Saudi Arabia).

Overall, the Saudi Education Expo provides, for some, new possibilities on continuing their future studies. We hope events like these will happen again in years to come.

*Flyer for the Alumni Talks Lecture

*The 'Alumni Talks' Lecture itself

*Entrance to the Saudi Education Expo

Writer: Fathi Rizqi

P.S

Ustadz Rozan *hafidzahullahu ta'ala,* the person who organized FIWA's trip to SEE along with Ustadz Ghufran *hafidzahullahu ta'ala,* has departed to the holy city of Medina approximately three weeks before the moment this article is written (27th August 2026). We pray to Allah *subhananahu wa ta'ala,* the best for him in his search of knowledge in the holy city.

STUDENT CHALLENGE

— FREE 50k FOR FIRST PERSON TO BEAT IT!1! (It's a decryption challenge, made by Alde). Also fun facts are here too.

Fun facts & some extra stuff ig idk:

tbh this part is just more of fun facts and things that an be an article but is too short to actually exist.

We've changed our Motto!

During the first, second and third edition(s) of our Newspapers, the motto that we've always had put next to the logo on the Masthead design was "Veritas Lux Mea — Truth is my light". But because we thought it was way too edgy and very AI-ahh, we changed it to something more generic/balanced. Now it's "Documenting FIWA And Beyond". This new motto truly reflects what we actually do. Since, y'know, we also do journalism, and not limited to just newspapers and stuff.

Mukhoyyam replaced with Excursion, and delayed to next semester?

According to Ustadz Johan; Due to the preperation complexity of Mukhoyyam, and expectation to get PDCs highly involved in the preperation & execution, while at the same time the PDCs are having intensive training in the last two weeks, then unfortunately, Mukohyyam will be re-scheduled to the next semester.

As a result, the excursion that was scheduled next semester will replace the Mukhoyyam thats' supposed to happen this semester. This excursion will be led by Academic teachers instead of PDCs.

This newspaper has been deemed appropraite by the CAE, and have been reviewed by Ustad Baihaqi for english grammar corrections.

CHALLENGE INFO:

Oh no! Someone (Nicknamed *The Architect*) hacked the still developing FITR Website! Your goal is to bring it back online, by Decrypting many codes and doing lots of investigation!

(this is only lore btw)

Prize: 50k Rupiah of whatever in FIWA MART! (50k voucher)

Instructions:

1. Open the link that has been sent in the Email sent to student.ikhwan, or if you can, type it from here; **bit.ly/FITR-CHALLENGE-IV** Or you can scan the QR code down below
2. Just do what is on there, i guess. I wont give hints about what to do in it, ofc
3. Follow the rules below!

Rules:

1. Do not use AI Excessively, as in copy pasting it and just asking for the answer immediately. **Only use it as a Decryption tool.** What to do you gotta figure out (at least ony ask AI about it when you're that desperate)
2. **Do not use Temporary chats when using AI.**
3. No using Inspect Elements or whatever
4. No using any Hacker shenanigans to bypass the instructions you're given on the bit.ly
5. Know that Allah, the Omniscient and all-seeing witnesses you when you're beating it. **So do it the way it is.**

Note:
If the link doesn't work or if theres a problem with the website, tell Ammar ASAP. Also, once you've finished doing it, Ammar will call you from the front of the mosque.

Good Luck!

**QR Code to the bit.ly*
